New Tour

Trueblend is Blizzard's foundational woodcore technology which allows us to specifically design every model and size for the target customer. We select specific woods, characterized by different densities, blending and positioning them to form woodcores that are designed to optimize the flex of and deliver a smooth and balanced feeling.

This technology also allows Blizzard to build skis that pack a tremendous amount of performance but that are not hard to ski.

Each product family has a distinct Trueblend in order to optimize the right performance, control, and confidence.

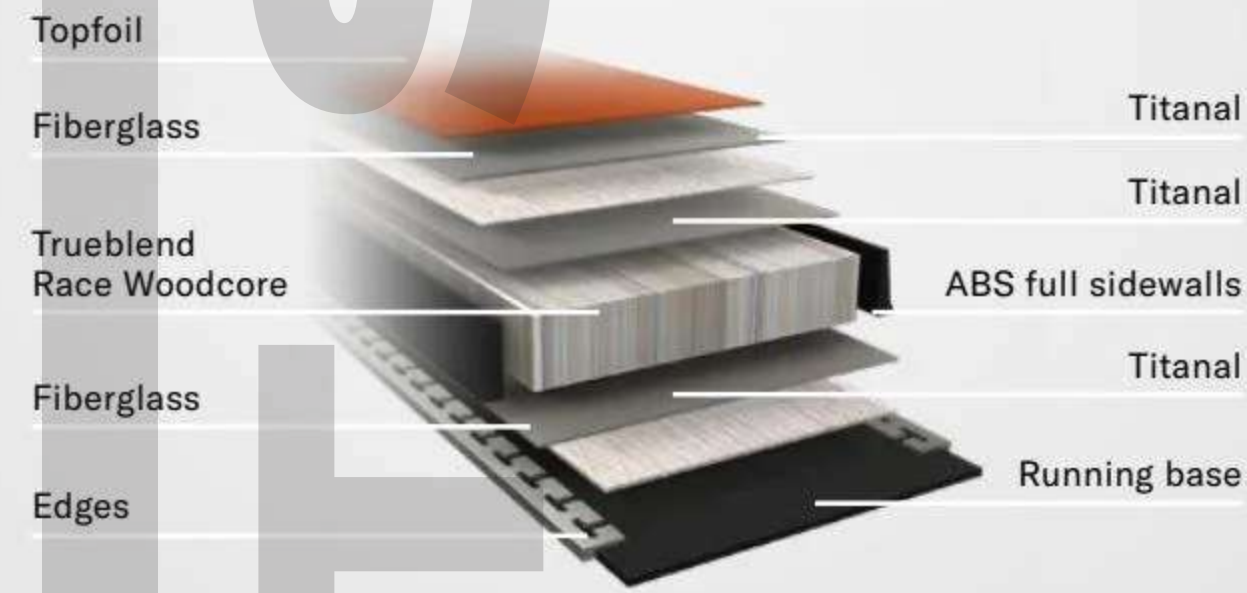

Blizzard Constructions

At the heart of every ski is a specifically designed woodcore, fine-tuned to deliver the optimal flex and maximum performance per category.

The construction surrounding the woodcore is also specific to each category, designed to complement the woodcore and provide the best skiing experience for every type of skier in every discipline.

Trueblend Piste Woodcore

Perfect balanced flex

The Trueblend Piste Woodcore is designed with a harder flex zone in the center, that provides stability and edge grip, a medium flex zone in front of and behind the binding that provides control, and a soft flex zone in the tip and tail that provides easy turn initiation and release.

Trueblend technology allows us to precisely control the flex throughout the whole length of the ski and in every size.

Stormbird

**Unlock
Your Turn.**

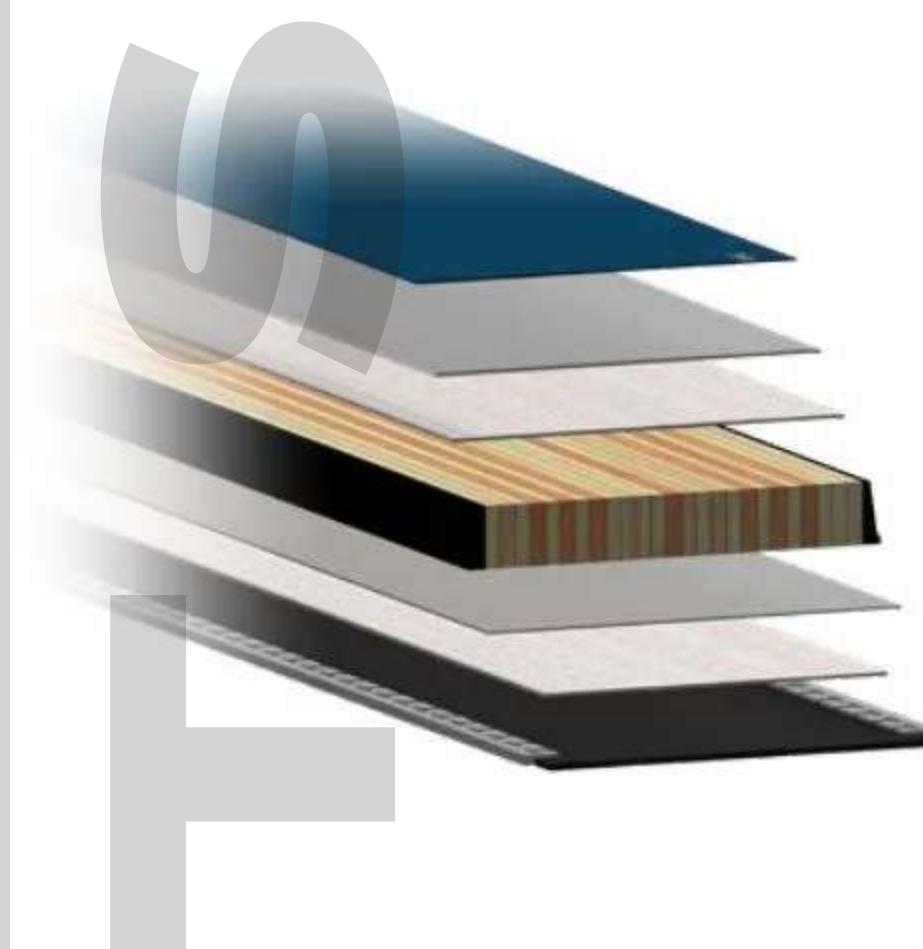

**Make your every run effortless.
Make each turn intuitive.**

Stormbird Constructions

Tailor-made Titanal Constructions.

The Stormbird collection combines two advanced titanal constructions to meet different skier needs. The double titanal design enhances edge grip, responsiveness, and stability at all speeds, ensuring control and performance in every turn. For a smoother, more user-friendly ride, the single titanal layer offers accessible edge grip, easy turn initiation, and solid stability, making it ideal for skiers seeking a more forgiving, versatile experience.

Trueblend Piste SP Woodcore

Accessible Performance.

The Trueblend Piste SP Woodcore is designed with a harder flex zone in the center, that provides stability and edge grip, a medium flex zone in front of and behind the binding that provides control, and a soft flex zone in the tip and tail that provides easy turn initiation and release. Trueblend technology allows us to precisely control the flex throughout the whole length of the ski and in every size.

Vibration Dampening System

Smoother Turns, Enhanced Stability.

Strategically placed rubber layers at the tip and tail absorb vibrations, ensuring a smoother and more stable ride. By reducing chatter and enhancing control, this technology delivers accessible performance, making turns easier and skidding more intuitive. Perfect for skiers who value comfort and confidence on the slopes.

Zero G

**We Won't
Weight up.**

With your mission quest in mind
– control and security are everything.

Trueblend Tour Woodcore

Accessible Performance.

Engineered for balance, the Trueblend Tour Woodcore 2.0 combines lightweight paulownia with stronger poplar in a precise ratio to achieve smooth skiability and reliable strength. By using less carbon in the construction, but with more poplar in the core, we deliver a ski that's versatile, playful, and confident in every turn. The blend provides flex where it matters most: strength underfoot for stability and softer tips and tails for effortless turn initiation and enhanced terrain adaptability.

Ash Wood Insert

Wood is good.

For exceptional strength and smoother control, the Zero G introduces an ash wood insert in the core. Strategically placed underfoot, this material provides torsional rigidity and power transmission where you need it most—without the nervousness of carbon. Ash ensures stability for even the most demanding conditions, while maintaining a playful feel for every adventure.

5 Radius Sidecut

Dynamic Control, Seamless Turns.

Precision meets versatility with the 5 Radius Sidecut. This innovative design divides the ski into zones with varying radii, creating a unique balance of edge grip, control, and flow. A straighter center radius enhances confidence on steep and icy terrain, while smoother transitions toward the tip and tail provide seamless turns and adaptability in all snow conditions. Perfect for technical ascents and dynamic descents alike.

Touring

Touring Women to Women

W2W Zero G Construction

Designed specifically for women, the Zero G women's construction prioritizes ease and control. By reducing the stiffness of the ski by 9.7% compared to the men's version, we deliver a ski tailored to women's needs: smoother turns, and an unmatched connection to the mountain.

C.A.S.

Custom Adaptive Shape

C.A.S. Liner

C.A.S. has revolutionized ski boots with regards to fit and personalization. The liners are anatomically shaped for optimal comfort and offer great heel hold. The internal part of the liner is shaped to match the foot while the exterior matches and conforms to the shape of the shell. The dual density micro-cell material is durable and easy to customize. The C.A.S. liners are less prone to pack-out maintaining the fit over a longer period of time.

Liner features

- Anatomic and precise shape
- Dual density pre-shaped thermoformed microcell material
- Great out-of-the box fit
- Enhanced sensitivity

Liner customization

- FLOATING TONGUE to adjust instep area
- THERMO-SHAPING liner in the oven: 80°C - 176°F / 6 minutes.
- PUNCHING (increase volume) microcell material can be heated and punched in problem fit areas.
- GRINDING (increase volume) microcell material is easily grindable up to 2mm in problem fit areas.
- FIT KIT (decrease volume) glue the c.a.s. fit kit pre-shaped pieces to decrease the volume of the liner.

CAS
CUSTOM ADAPTIVE SHAPE

C.A.S. Shell

The C.A.S. Shell has an anatomical shape that matches the shape of the foot. This allows for a better out-of-the box initial fit. The dimples on the shell offer less surface tension and facilitate heating, making customizing the shell easier. The shell retains the new shape better and longer.

Shell features

- Anatomic and precise shape
- Easier and faster thermo-forming
- Easy customization

Shell customization

- PUNCHING (increase volume)
- GRINDING (increase volume)

Best Fit Out Of The Box

The anatomical shape of the liner and shell are the key to a great out-of-the-box fit.

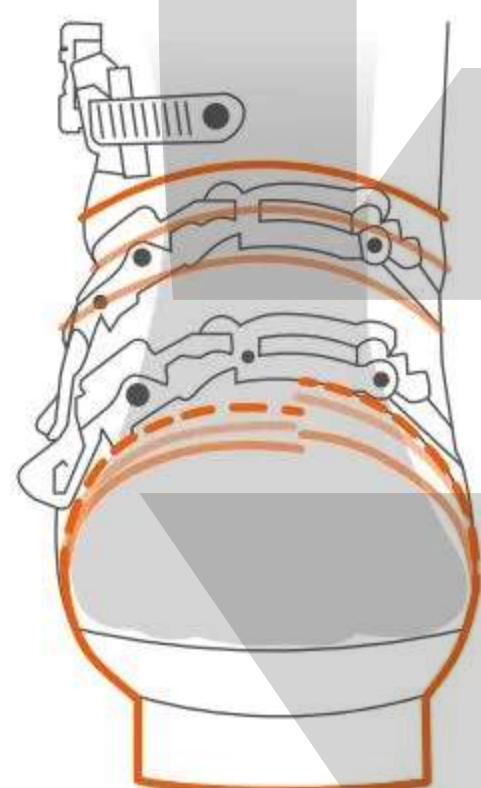

The closer the liner and shell match the natural shape of the foot, the better the fit and performance will be.

Volume Concept

Best fit out-of-the box. Precise anatomical shape results in an accurate fit that offers more comfort and better performance. To guarantee the perfect fit matching every foot shape.

Tecnica offers 5 different volumes:

- LOW VOLUME: 98 mm
- MID VOLUME FREERIDE: 99 mm
- MID VOLUME: 100 mm
- HIGH VOLUME FREERIDE: 102 mm
- HIGH VOLUME: 103 mm

T.Power

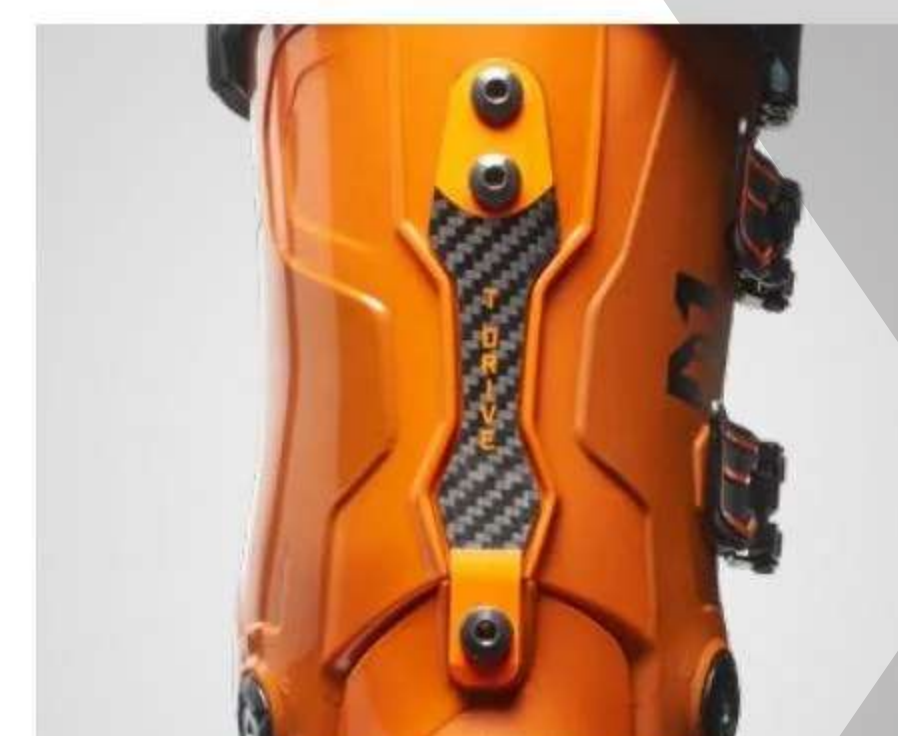

New T-Drive 2.0 on MACH1 LV series

Performance

Tecnica's new T-Drive 2.0 connects the shell to the cuff in a new and innovative way. The cuff is free to slightly rotate in the front, which enhances power transmission to the front of the boot – where the skier needs it most.

Benefits:

- Supplying a long, consistent and progressive flex.
- Efficient Power Transmission without material deformation.

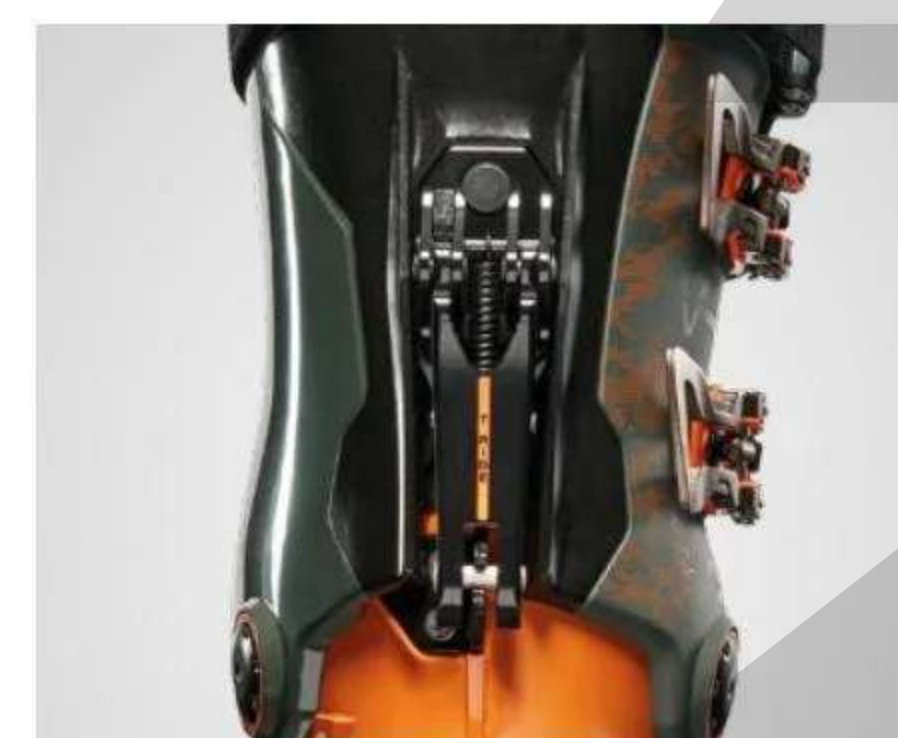

T-Drive on MACH1 MV & HV series

Drive Precision

The T-Drive dynamic carbon connector creates a longer lever arm compared to traditional ski boots.

This allows:

- Quicker edge to edge transitions.
- Increased lateral power and stability.
- Edge drive precision.

T-Ride on COCHISE series

High Performance Walking System

The T-Ride system is fully integrated into the boot design. It's a solid cuff-to-shell connection which delivers the perfect combination between downhill performance and uphill hiking ability.

T-Hike on ZERO G series

Where Walkability Matches Downhill Performance

The T-Hike available on Zero G Peak and Zero G Tour features the unique Double Blocking Mechanism. It offers strong, progressive flex and great lateral power transmission. The shell is connected to the cuff at two separate points, and once in hiking mode it guarantees unrestricted walkability. In addition, the internal spoiler delivers unique solidity to the boot on downhill.

Give your old ski boots a second life.

RECYCLE YOUR BOOTS

"We are at the beginning of a new way of conceiving the skiboot life cycle. Recycle Your Boots is not the final answer, not yet, but it is a site of constant innovation."

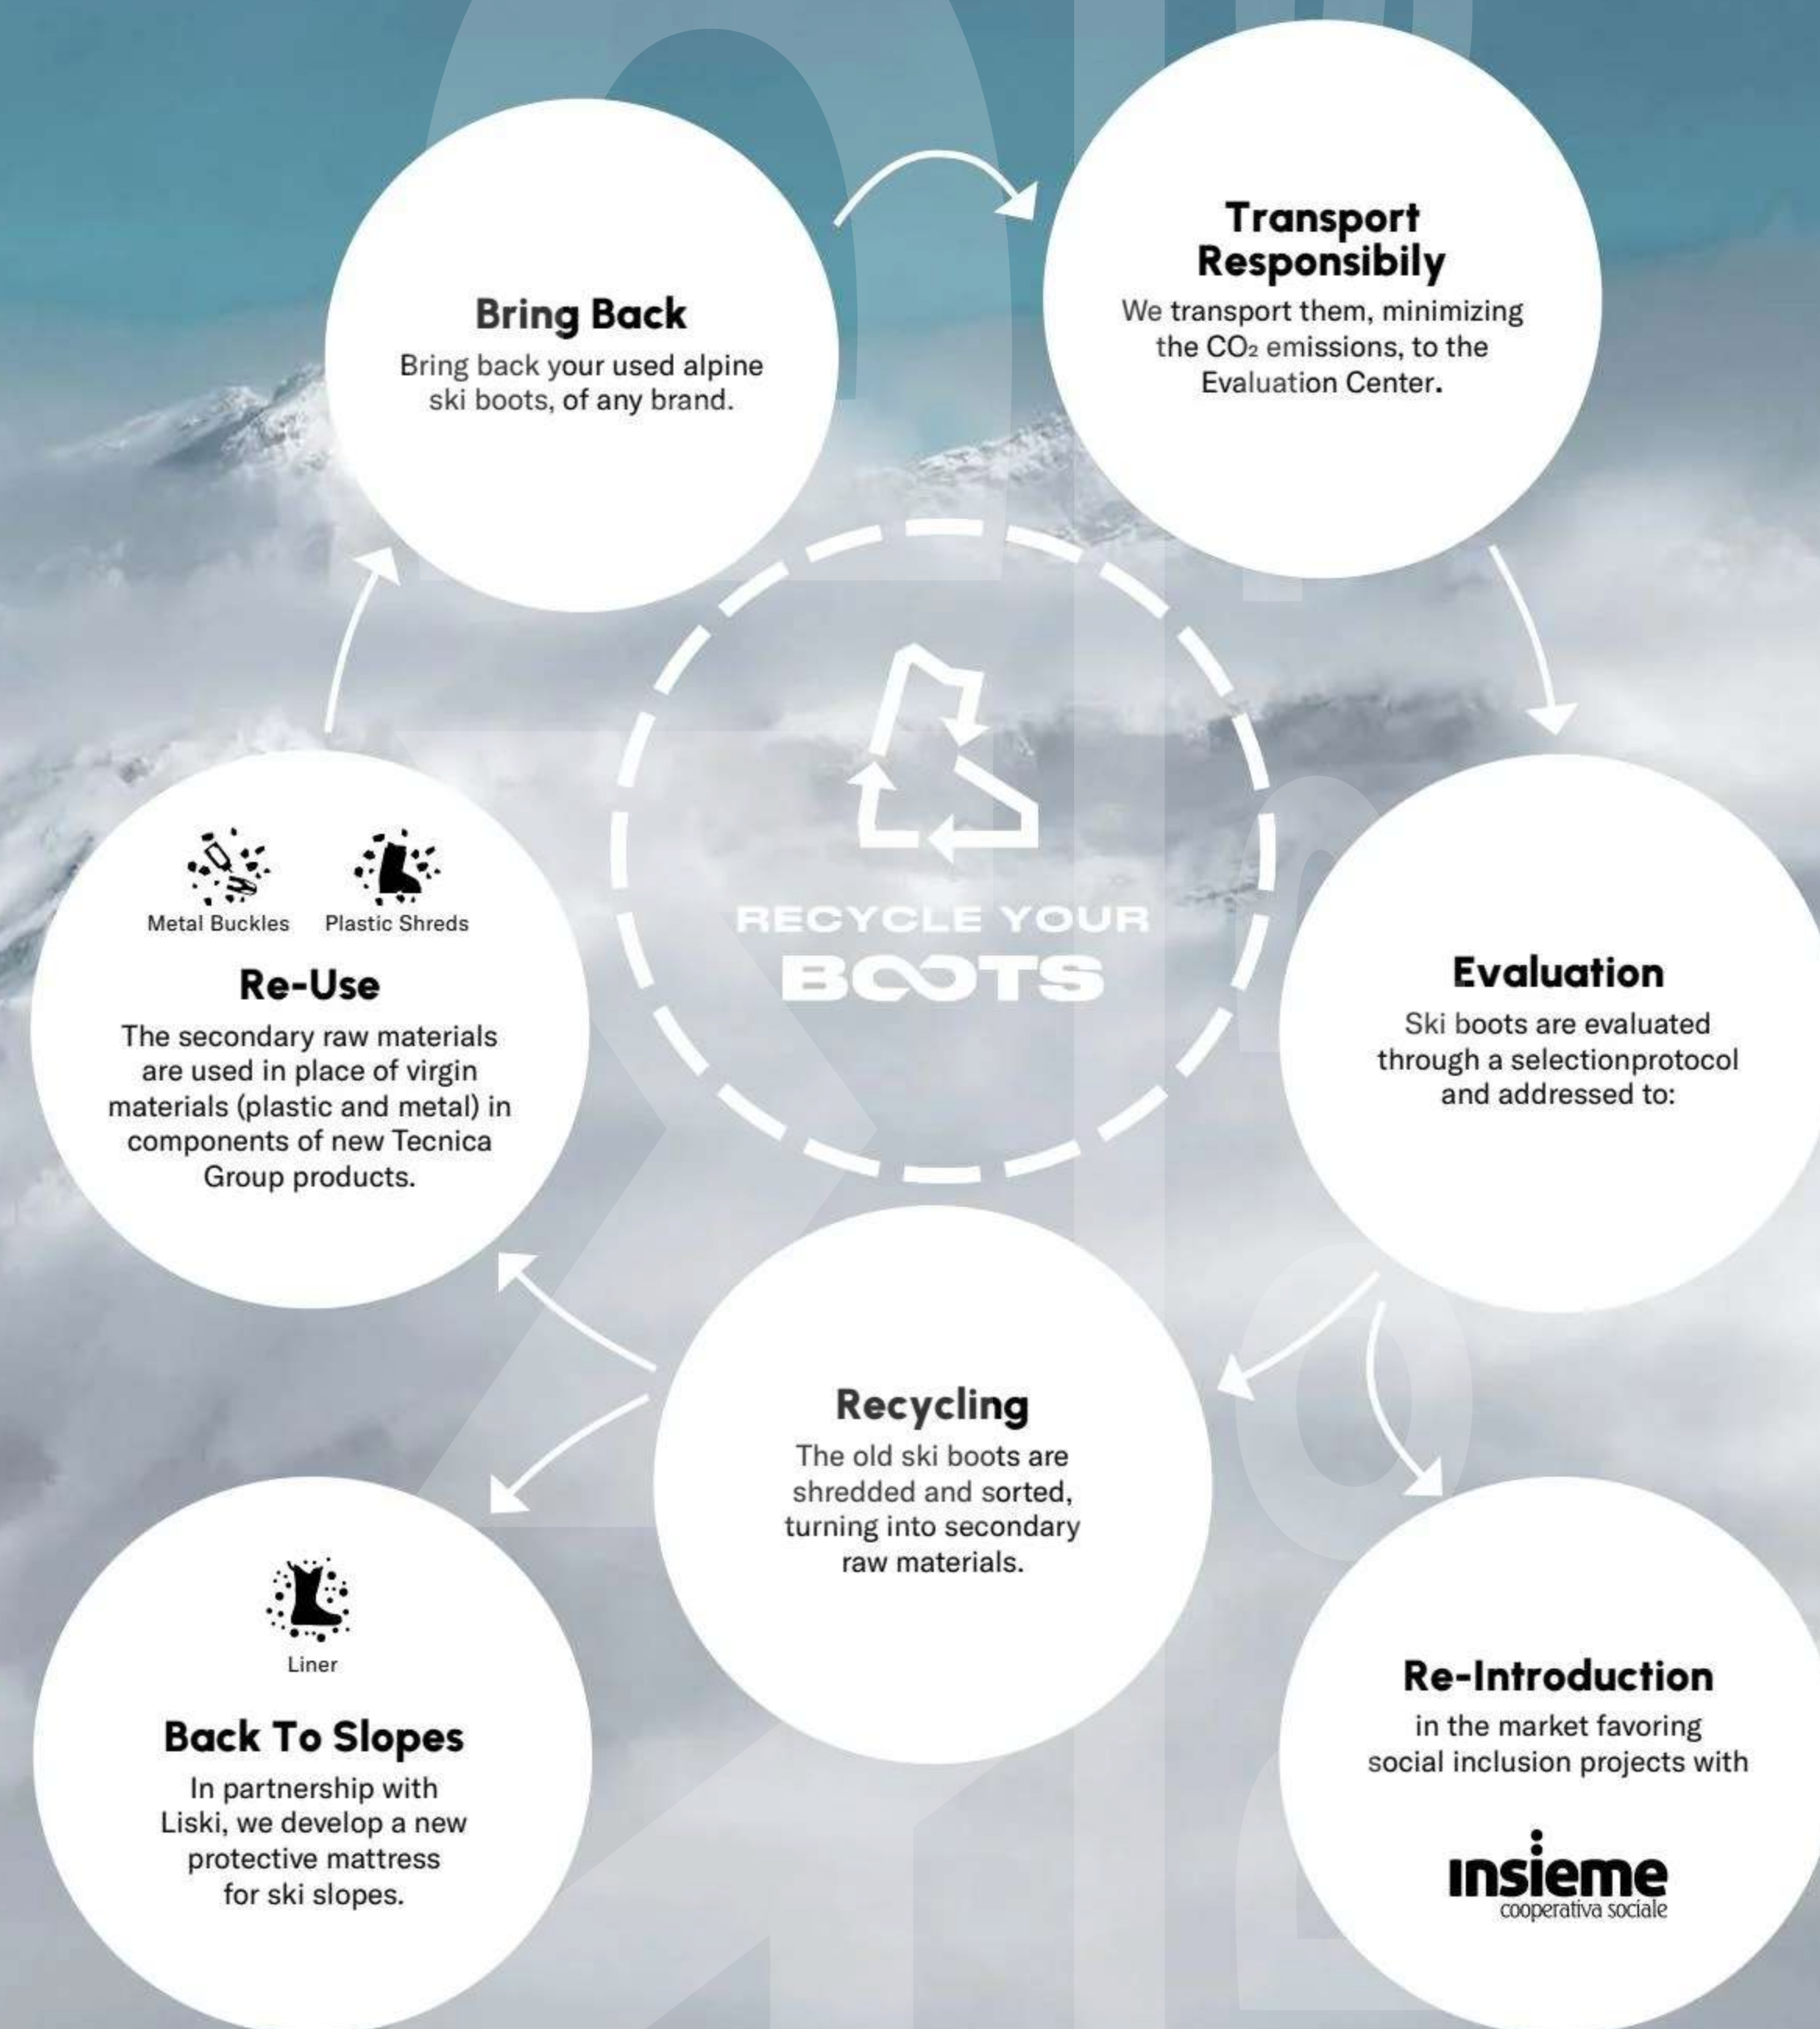

Plastic waste is a problem.

Recycle Your Boots was born from the consciousness that our society globally is producing an enormous quantity of waste. And that plastic has become a big problem for our planet, literally as big as a continent. When old ski boots reach the end of their usable life, they often end up in a dump or are burned in waste-to-energy plants.

We want to make it possible for anyone to return their old boots, from any brand. Tecnica will recycle up to 85% of the old pair, in a transparent and sustainable process.

Tecnica launched in 2021 the Recycle Your Boots campaign to make a circular economy the new business model for the ski industry. The collecting and recycling initiative was adopted by the life programme – the EU's funding instrument for the environment and climate action – and is effective across thirteen countries as early as this winter season.

Since 2021, we have already collected over 29000 pairs of ski boots across Europe.

Bring Back
Bring back your used alpine ski boots, of any brand.

Transport Responsibly
We transport them, minimizing the CO₂ emissions, to the Evaluation Center.

Evaluation
Ski boots are evaluated through a selection protocol and addressed to:

Re-Introduction
in the market favoring social inclusion projects with
insieme
cooperativa sociale

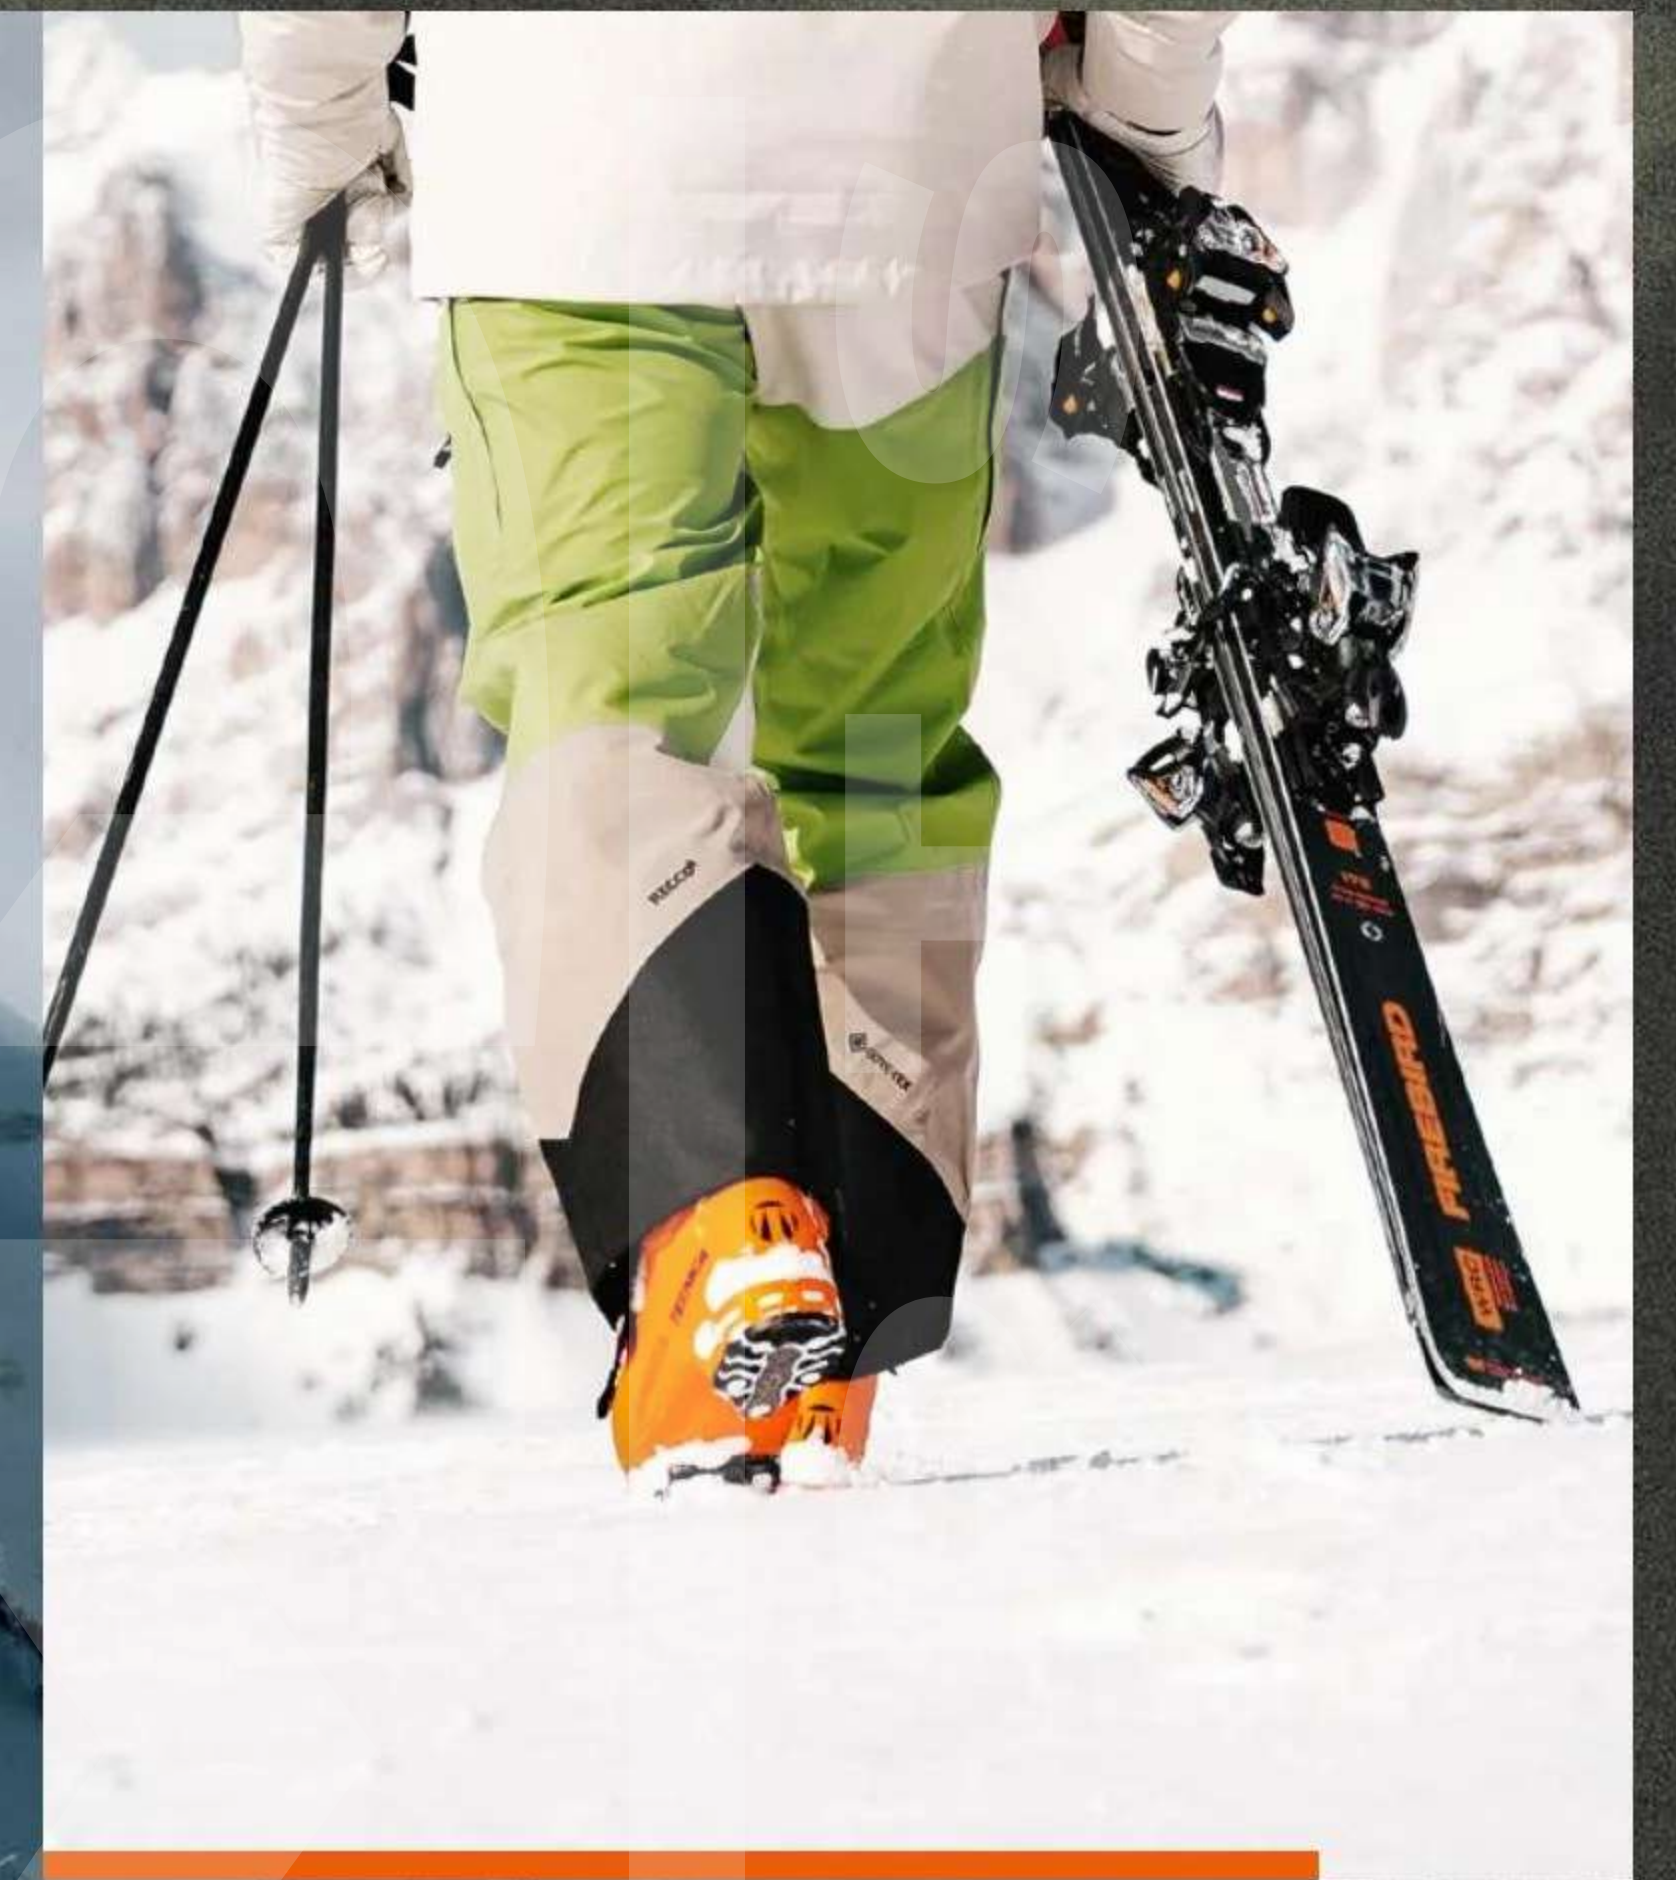

Recycling
The old ski boots are shredded and sorted, turning into secondary raw materials.

Re-Use
The secondary raw materials are used in place of virgin materials (plastic and metal) in components of new Tecnica Group products.

Back To Slopes
In partnership with Liski, we develop a new protective mattress for ski slopes.

Mach1 LV 130 TD2

Real Feel.

NEW T-DRIVE 2.0

The new T-Drive 2.0 is a two-piece mechanism that actively connects the shell and cuff. Its dynamic design allows the cuff to slightly rotate at the front, enhancing power transmission to the skier's forefoot—where it matters most. This innovative system reduces shell deformation, delivering a consistent and progressive flex regardless of temperature. With T-Drive 2.0, skiers gain greater control and freedom to harness the boot's full potential.

BENEFITS

- Flex of the boot: 100% depending on T-Drive 2.0
- Cuff rotates without material deformation of the shell
- Flex is consistent throughout a wide range of temperatures
- Flex is longer and more progressive

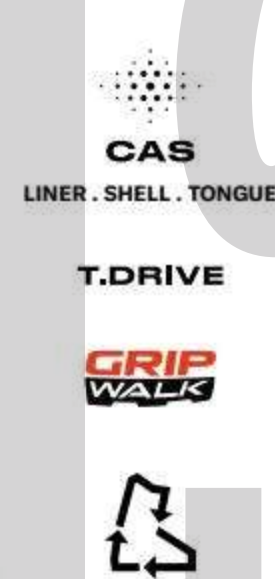

C.A.S. LINER

We take our liners very seriously. Without the same level of focus and commitment that go into our shells, we couldn't deliver on the fit, performance and personalization that we promise from Mach1 LV. With 46 individual parts going into each line - 36 requiring hand stitching - our inside is as much of a piece of art as our outside. Real Feel from the Inside- Out.

Zero G Tour Pro

The hits keep coming with the Zero G Tour Pro. Recently redesigned from the ground up to rave reviews, this boot received a few minor tweaks to keep a best-in-class boot evolving in the right direction. Stiff enough to be looked at as a freeride boot and light enough to be the go-to piece for major uphill missions, the Zero G Tour Pro threads the line between lightweight and performance. With zero friction in walk mode, this boot is trusted by professional guides who make their living on the skin track. And, with a precise anatomical fit and natural flex, pro skiers trust this boot for film segments and burly descents.
